NEW DELHI 3 (INDIA); }
The 3rd Oct., 1949. }

K. MITRA,
for Registrar General, India.

NATIONAL SAVINGS CERTIFICATES

Are now available in three different series, maturing after 5, 7 and 12 years. The certificates yield 3%, 3½% and 4-1/6% simple interest respectively, at maturity. The 12 years certificates increase your money by 50% but if necessary can be encashed after 18 months (Rs. 5/- certificates after 12 months). The 5 and 7 years certificates can be encashed at any time.

National Savings Certificates are obtainable in denominations of 5, 10, 50, 100, 500, 1,000 and 5,000 and you can invest upto Rs. 25,000 in them (inclusive of any Post Office cash certificates held).

Full particulars obtainable from all post offices, District Organisers of the National Savings Scheme, Assistant National Savings Officers, Provincial National Savings Officers or the National Savings Commissioner, Simla.

TODAY'S SAFEST AND MOST PROFITABLE INVESTMENT

Births and deaths from principal diseases in towns with a population of over 30,000 in the Provinces of India and some of the Indian States for the week ending the 27th August 1949.

REMARKS

The figures of births and deaths shown in this statement for the week ending the 27th August, 1949 relate to 189 towns with an estimated population of 21,906 thousands. The total number of towns is 213 and their population is 25,943 thousands. Thus 79% of the total number of towns representing 4% of the total population is covered in this statement. The numbers of births and deaths recorded in these towns were 16,066 and 93,51 representing birth and death rates of 23.2 and 22.2 per thousand of population respectively.

A) Indian Provinces.—The data here relate to 157 towns with an estimated population of 20,387 thousands. Information for Bihar and Assam could not be included. The number of towns is 189 and their population is 23,320 thousands. Thus 83% of the total number of towns representing 87% of the total population is covered. The numbers of births and deaths recorded in these towns were 15,174 and

8,803 representing birth and death rates of 38.7 and 22.4 per thousand of population respectively. The table at the end gives the position by provinces. Etawah and Farrukhabad—Fatehgarh in the United Provinces recorded high death rates of 60.0 and 58.7 per thousand of the population respectively. None of the specified causes seems to be responsible to any appreciable extent for these high rates.

(B) Unions and States:—The data here relate to 12 towns with an estimated population of 1,519 thousands. The total number of towns is 24 and their population is 2,623 thousands. Thus 50% of the total number of towns representing 33% of the total population is covered. The numbers of births and deaths were 892 and 1,548 representing birth and death rates of 30.5 and 18.3 per thousand of population respectively. No town recorded a high death rate of 50 or over per thousand of the population.

*In case of towns where there have been an abnormal movement of population, it is likely that the population estimates may not be sufficiently reliable for calculating the birth and death rates.

† Figures not available.

REMARKS

The figures of births and deaths shown in this statement for the week ending the 3rd September 1949 relate to 172 towns with an estimated population of 22,280 thousands. The total number of towns is 213 and their population is 25,043 thousands. Thus 80% of the total number of towns representing 86% of the total population is covered in this statement. The numbers of births and deaths recorded in these towns were 16,492 and 9,708 representing birth and death rates of 38.5 and 22.7 per thousand of the population respectively.

(A) Provinces.—The data here relate to 150 towns with an estimated population of 20,565 thousands. Information for Bihar Assam could not be included. The total number of towns is 189 and their population is 23,320 thousands. Thus 83% of the total number of towns representing 88% of the total population is covered. The numbers of births and deaths recorded in these towns were 15,341 and 9,059 representing birth and death rates of 38.8 and 22.9 per

thousand of population respectively. The table at the end gives the position by provinces. The towns of Ellichpur in C.P. & Nadiad in Bombay recorded high death rates of 62.9 and 58.9 per thousand of the population respectively. The high death rate in Ellichpur was to some extent due to deaths from fevers while in Nadiad it was mainly due to deaths from fevers.

(B) Unions and States.—The data here relate to 16 towns with an estimated population of 1,715 thousands. The total number of towns is 24 and their population is 2,623 thousands. Thus 67% of the total number of towns representing 65% of the total population is covered. The numbers of births and deaths were 1,151 and 649 representing birth and death rates of 34.9 and 19.7 per thousand of population respectively. No town recorded a high death rate of 50 or over per thousand of the population.
